Profile Summary

I am a dedicated Java Full Stack Developer with over 2 years of experience in building scalable web applications using Spring Boot, React.js, JSP, and PostgreSQL. At the Center for Good Governance, I have worked on dynamic projects like the APSEC election management system, implementing reservation handling, result processing, and multilingual form generation. My key achievements include optimizing backend services using GitHub Copilot — reducing development time by 20% — and leveraging ChatGPT for debugging and refactoring legacy code. I am passionate about solving technical challenges, improving application performance, and collaborating with cross-functional teams. My career goal is to deepen my expertise in microservices architecture and cloud technologies to build innovative, high-performance solutions.
