Kasthuri Shravani

JAVA FULL STACK DEVELOPER • DISTRIBUTED MICROSERVICES • AI-ASSISTED ENGINEERING

Hyderabad, India • +91-9182456681 • kasthurishravani1212@gmail.com • **linkedin.com/in/shravani-kasthuri**

PROFESSIONAL SUMMARY

Full Stack Developer with 3+ years of experience, primarily focused on backend architecture and high-availability distributed systems. Specialized in building scalable microservices using **Java, Spring Boot, Kafka, and PostgreSQL**, complemented by React frontends. Proven track record of improving database performance—reducing API latency by 30% through query optimization, execution plan tuning, and Redis caching. Actively leverages modern AI developer tools to accelerate migrations, refactoring, and feature delivery.

TECHNICAL SKILLS

Core Backend & Design	**Java,** Spring Boot, Spring Cloud, Netflix Eureka, RESTful APIs, Microservices Architecture, Multithreading, Memory Management, OOP, React.js, TypeScript, JavaScript
Streaming & Caching	**Apache Kafka** (Event Streaming, Async Decoupling, Consumer Groups), **Redis** (Distributed Caching, Latency Tuning)
Databases & SQL Tuning	**PostgreSQL, MS SQL**; Dual-Database Synchronization, Complex JOINs, Subqueries, CTEs, Window Functions (`ROW_NUMBER`, `RANK`), Query Optimization, `EXPLAIN ANALYZE`, B-Tree Indexing, ACID & Isolation Levels
AI-Assisted Tech & DevOps	**AI Agents, Antigravity, OpenAI Codex, Copilot, Cursor, Claude** (Prompt Optimization, Context Windows; Spring AI / LangChain4j foundations), **Docker, Jenkins CI/CD, Git, JUnit**

PROFESSIONAL EXPERIENCE

Java Full Stack Developer — **Centre for Good Governance (CGG)** **Hyderabad, India | Mar 2023 – Present**

- **High-Availability Microservices:** Architected and scaled Spring Boot microservices serving 10M+ users with 99.9% availability across mission-critical civic and governance platforms.
- **Statewide Data Mapping & Sorting:** Engineered core data-mapping engines and sorting procedures processing complete state voter datasets, resolving critical high-volume bottlenecks during live operational scenarios.
- **Database Optimization (30% Latency Cut):** Profiled query bottlenecks using PostgreSQL `EXPLAIN ANALYZE`; refactored queries with CTEs and window functions, tuned composite indexes, and implemented Redis caching to strip 30% off API response times.
- **AI-Accelerated Engineering:** Built the complete CURE 1 payment microservice within 3 days using Antigravity and Codex; migrated TSEC legacy Struts to modern Spring Boot/React in 1 week using Claude, Cursor, and Copilot for rapid query optimization and automated refactoring.
- **Secure Transactions & DevOps:** Enforced strict ACID transactional guarantees and custom AES-256-GCM encryption filters on payment channels; cut deployment overhead by 40% via automated Docker & Jenkins pipelines.

KEY ENGINEERING PROJECTS

Andhra Pradesh State Election Management System (APSEC) **Java • Spring Boot • PostgreSQL & MS SQL • React.js**

- Architected voter data mapping, dual-database synchronization between **PostgreSQL and MS SQL**, and automated Electoral Roll (ER) print generation microservices handling statewide records under strict SLAs.
- Authored optimized SQL sorting procedures, cross-database sync routines, and aggregation queries using window functions (`ROW_NUMBER()`, `RANK()`) and CTEs; actively resolved live election-day concurrency issues.

Telangana State Election Commission (TSEC) **Spring Boot • React.js • AI Agents • RESTful APIs • PostgreSQL**

- Modernized legacy Struts monolith into modular Spring Boot/React microservices in 7 days via AI coding agents, refactoring SQL queries for rapid statewide voter mapping and ER print generation.
- Optimized high-volume data streams between backend services and UI, delivering real-time electoral roll status and administrative dashboards.

Common Utility Payment Platform (CURE 1) **Spring Cloud • Eureka • Kafka • Redis • Antigravity • Codex**

- Architected and delivered complete containerized microservices from scratch within 3 days leveraging AI tools (Antigravity, Codex) for rapid scaffolding, schema mapping, and API contracts.
- Integrated third-party government payment APIs with idempotent request handling, custom AES-256-GCM encryption filters, and strict ACID transaction isolation under peak traffic.

EDUCATION

B.Tech in Electronics & Communication Engineering — RGUKT (IIIT Basar) **2019 – 2023**

Pre-University Course (MPC) — RGUKT (IIIT Basar) **2017 – 2019**
